This is a sentence in the abstract. This is another sentence in the abstract. This is yet another sentence in the abstract. This is the final sentence in the abstract.

1 Introduction

The optional arguments of `\documentclass{eptcs}` are

- at most one of `adraft`, `submission` or `preliminary`,
- at most one of `publicdomain` or `copyright`,
- and optionally `creativecommons`,
 - possibly augmented with
 - * `noderivs`
 - * or `sharealike`,
 - and possibly augmented with `noncommercial`.

We use `adraft` rather than `draft` so as not to confuse `hyperref`. The style-file option `submission` is for papers that are submitted to `\event`, where the value of the latter is to be filled in in line 2 of the tex-file. Use `preliminary` only for papers that are accepted but not yet published. The final version of your paper that is to be uploaded at the EPTCS website should have none of these style-file options.

By means of the style-file option `creativecommons` authors equip their paper with a Creative Commons license that allows everyone to copy, distribute, display, and perform their copyrighted work and derivative works based upon it, but only if they give credit the way you request. By invoking the additional style-file option `noderivs` you let others copy, distribute, display, and perform only verbatim copies of your work, but not derivative works based upon it. Alternatively, the `sharealike` option allows others to distribute derivative works only under a license identical to the license that governs your work. Finally, you can invoke the option `noncommercial` that let others copy, distribute, display, and perform your work and derivative works based upon it for noncommercial purposes only.

Authors' (multiple) affiliations and emails use the commands `\institute` and `\email`. Both are optional. Authors should moreover supply `\titlerunning` and `\authorrunning`, and in case the copyright holders are not the authors also `\copyright holders`. As illustrated above, heuristic solutions may be called for to share affiliations. Authors may apply their own creativity here.

*A fine university.

These fields should not be used to duplicate information that is already provided through the DOI of the paper. You can find archival-quality URL's for most recently published papers in DBLP—they are in the bibtex-field ee. In fact, it is often useful to check your references against DBLP records anyway, or just find them there in the first place.

When using \LaTeX rather than `pdflatex` to typeset your paper, by default no linebreaking within long URLs is allowed. This leads often to very ugly output, that moreover is different from the output generated when using `pdflatex`. This problem is repaired when invoking `\usepackage{breakurl}`: it allows linebreaking within links and yield the same output as obtained by default with `pdflatex`. When invoking `pdflatex`, the package `breakurl` is ignored.
